

Test Plan

The method of testing that we decided to use was Manual Testing (mainly because we did not have the time to properly do unit tests).

This is our basic process for testing our application (the steps are derived from the Use Cases):

1. Add Initial Admin/Moderator(admin@u.com) to System.
2. Moderator adds a Registrar
3. Registrar adds Courses/Faculty/Students
4. Registrar adds Courses to Faculty/Students
5. Students ask/answer/vote-on Questions,
6. Students add Friends
7. Students send/view Private Messages
8. Faculty ask/answer/vote-on Questions
9. Faculty flag Answers/Questions
10. Moderator views flagged Posts
11. Moderator un-flags Posts
12. Moderator removes Posts

If we are able to make it through all of these steps without any bugs, then the application is deemed “tested/ready”. However, if we do encounter a bug, we immediately investigate it and attempt to resolve the issue.
